Design and Access Statement

After Fairfield Builders Supplies was burgled in February on 2 nights that resulted with costs of over £6500 in damage to the property and stock that was stolen it was realised a greater level of security was needed.

So 14.2lin m Security wire was erected on top of an existing wall 520mm high and on the existing roof 10.45 Lin m 700mm high this security wire was erected on galvanized steel posts that were bolted to the existing wall and building.

During the time the wire was been fitted there was a further attempted raid but they were disturbed by the residents of Rockfield Road who confronted the masked men attempting to climb over the wall which divides Rockfield Road and Fairfield Builders and they ran off.
