DOWNPIPE, BRACKETS & HOPPERS

PROSTYLE

106mm PVC RAINWATER SYSTEM

NEW PROFILED GUTTER SYSTEM

PROFILE of GUTTER IN BLACK!

ALL THE APPEARANCE OF TRADITIONAL CAST IRON, BUT WITH ALL THE BENEFITS OF PVC. THE BRAND NEW BRETT MARTIN CAST IRON STYLED RAINWATER SYSTEMS GIVE YOU BOTH.

The specially coated PVC gutter systems combine with traditionally styled plastic pipework to give the full appearance of a cast iron system. The full range comes ready to fix with no need for primers, undercoat or topcoat to prevent corrosion.

Available in 106mm Profiled, 112mm Round, 115mm Deep and 68mm downpipes and accessories

NUMEROUS BENEFITS INCLUDE:

- Significantly cheaper than Cast Iron
- Huge savings in installation time
- 4m gutter lengths means fewer joints and less labour
- Integral seals that speed installation are included in the cost (no fixing kit extras)
- Lighter, easier and safer to handle. Provides health and safety benefits particularly when working at heights
- Simple and quicker to cut to length
- No nuts and bolts, lead strip spacers, spanners, metal primer, paint or disc cutters required
- External fixing wings on gutter fittings ease installation and reduce the number of fascia brackets to maximise support

Cast Iron effect Downpipes and Hoppers

The pipework range includes a 1.8m length of pipe with integral socket and fixing lugs, as does the pipe coupler and shoe to enable the downpipe to be secured to the wall. Pipe connection to the gutter outlet is achieved with either one of a range of one-piece offsets or directly into one of three styled hoppers.

Cast Iron Style Gutter Capacities

		Gutter Flow Capacity Litres per second		Maximum Roof Area m²	
		Level	1:600	Level	1:600
