3. Location plan

1. Description:

The static caravan sited at Carrington House is a 35ft x 12ft (10.20m x 3.70m) Delta Kensington model. It is positioned on hard standing ground to the north west of Carrington House approximately 75m from the side elevation of the property. It is positioned 5m from the north easterly boundary wall with New Road B6062 and at 90 degrees to New Road. It is approximately 8m from the north westerly boundary with open land. This position allows visibility of Carrington House and the entrance drive to be maintained whilst allowing vehicular access to the site for the required renovation.

The proposal is that the caravan will be removed from the site following the completion of the works required to make Carrington House safe, secure and habitable. During this time it will provide primary living accommodation for our family. As of 7th July 2011 Carrington House became our permanent address following the completed sale of our previous home.
