DESIGN & ACCESS STATEMENT

6 November 2012

With regards to replacement shop front at 100 Market Street, Chapel En Le Frith.

Access

No changes to the access to the shop are proposed, other than the replacement of the external door and frame, which will remain in the same position. This new door will have a minimum clear width of 800mm .

Design

The existing shop front is non traditional.

The timber window frame has a high sill level and smaller panes of glass than in a typical shop.

Below the window is non-original poor quality artificial stone.

The external door is a modern type plywood bottom panel / glass top panel door.

The new window will have a black aluminium framework and clear glazing. This will have a sill height at 300mm above the ground level.

The wall below the window will be coursed natural gritstone to match the original front elevation stonework.

The new external door will be black aluminium / glazed panel.

The original black finish feature concrete surround is to remain

This replacement window frame/external door and natural stone wall will improve the appearance of this frontage.
