## 1.0 Introduction

This Design and Access Statement sets out background information and a description of proposed changes to 33 Harris Road, Buxton and supports an application for planning permission to High Peak Borough Council.

This document should be read in conjunction with the following drawings:

065 01 LP *Location plan*
065 01 01 *Existing plans and elevations*
065 01 02 rev A *Proposed plans and elevations*

## 2.0 Existing house

The existing property at 33 Harris Road is a semi-detached red brick dwelling at the end of a residential estate in the Harpur Hill area of Buxton. The dwelling comprises 3 bedrooms and a bathroom to the first floor and a kitchen/dining room and living room at ground floor level. There is an attached single storey outbuilding, currently used as a utility room to the rear of the property – this is believed to have been constructed at the same time as the original dwelling. A single garage has recently been demolished to the side/rear of the property – the concrete hardstanding to this former garage remains.

To date, no extensions or loft conversions have been undertaken to the property which remains largely in its original form except for internal modernisation.

The property has a reasonable size garden to the rear and currently overlooks livestock fields and the countryside beyond.

## 3.0 Proposed works

The applicants are seeking to provide a ground floor bedroom and level-access ensuite bathroom for an elderly member of the household whilst retaining adequate family living space and access to the rear garden. They also require a workshop for equipment and tools and a carport for a vehicle. The proposed single storey extension, which forms an L-shape around the existing house, accommodates these requirements whilst also seeking to minimise the visual impact on adjacent properties. The proposed extension covers the footprint of the former single garage (now demolished) and part of the footprint of the existing utility room. (The proposed extension projects 3m from the rear wall of the two-storey dwelling whereas the existing utility room projects 3.6m.)

The roof form of the proposed extension comprises a lean-to roof with a hip at the west corner. The roof materials to the extension will comprise plain tiles to match the colour and style of the existing roof. The extension walls will be red brick to match the existing dwelling. A small section of shallow-sloped felt roofing is proposed directly below the existing first floor bedroom window. (This is necessitated in order to retain the existing window because the junction of the extension roof is higher than the cill of the existing window.) The existing first floor bedroom window will be retained unchanged.

The carport is proposed to have a polycarbonate roof and be supported on timber posts.

All new windows will be white-framed upvc and double glazed. The new ensuite bathroom will have obscured glass for privacy.

## 4.0 Photographs of existing property
