HIGH PEAK
HPK/2013/0039
6 MAR 2013
BOROUGH COUNCIL

Requirement Statement

The proposal is to replace an existing wooden boundary fence (1.2m high) and replace with a galvanized steel fence (2.4m high). The length (176m) and position will remain the same as the existing fencing.

Due to bad weather over the past few months, some of this existing fencing has blown down and needs to be replaced. This particular section of the site boundary stretches around the land due for development into a new industrial unit (HPK/2010/0464). In order to secure this area of the Street Crane site; for both the construction process and when the site becomes operational, we feel that the steel palisade offers the best security and is like-for-like to the existing secured boundary.

The installation of which will not affect any access or egress to Frith Knoll road or public footpaths. The design of fence is shown in figure 1, the shape of the top of the palisade is shown in figure 2.
