Design & Access Statement for Trio Plus Lift Installation at: Bradshaw Hall, Bradshaw Lane, High Peak, SK23 9UL.

Please refer to the Trio Plus Drawings for design and technical information for the Lift.

The through-floor lift is designed to solve the problem for the disabled users, of access up the existing staircase from ground floor to first floor.

Go up the lane opposite the Hanging Gate Inn, all the way to the end, then park on the large parking area outside the house then walk down to the front door. Access is then through the front door into the porch then through to the kitchen where the lift is to be fitted.
Beware of the steps and stones when carrying the lift parts.

A Ford Transit van or similar will be used by the Building Team and by the Lift Engineers.

Further details can be found in our survey report.
