Planning Department

Design Statement: Proposed shop front renovation, 70 High Street West, Glossop

Design:
Replacement of existing shop front, which is extensively damaged due to neglect and broken guttering. New shop front will include a stone stall riser up to window sill height, a pitch pine shop front including double glazed units. It also includes a hand painted sign and new cast iron guttering, cast hopper and cast downspout.
All the works will be made by a local carpentry & masonry using traditional joinery methods. The glazing will be locally produced and the stone will be hand tooled Peakmore sandstone from a local quarry. Locally manufactured eco-friendly paint will be used. Where possible we will source any door furniture and hardware that is of high quality and is British made.
A Grant Application Form for this project has been submitted to Glossopdale Townscape Heritage Initiative. Before the submission of the application the shop front design was approved by the Council's Conservation Officer Mr Eddie Wilshaw.
