Because of the potential risk to human health, before development the applicant should ascertain whether gas protection measures are required. If necessary, a gas impermeable membrane should be incorporated within the structure along with a ventilated sub floor area. Any services entering/leaving the structure should be located above the gas impermeable membrane or alternatively, adequate seals will need to be provided if the membrane is to be breached. The details of the gas impermeable membrane and with particular attention to the joins with any existing structure and seals around any services, plus details of the sub-floor ventilation should be submitted to Environmental Health for approval prior to the works being carried out.
