SCORPION PALISADE

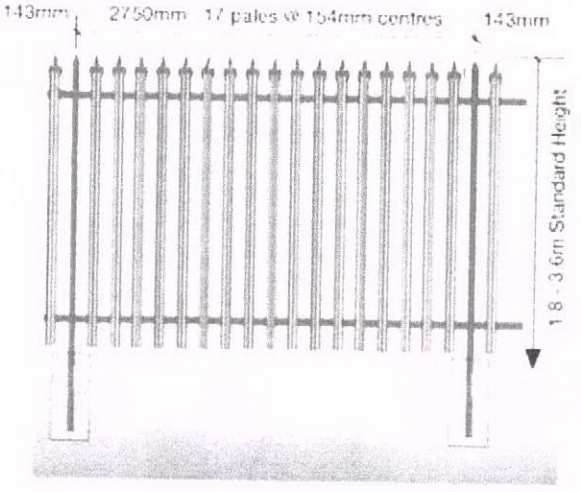

Advantaged by Design:
Scorpion has a distinctive double D profile which is light yet strong, making it easier to handle and quicker to erect. Returned edges along both side of the vertical pale increases the strength and safety of the fence. These edges also provides extra thickness of material to protect against cutting and creates a blunt edge to safeguard against accidental injury.

This lighter yet stronger product incorporates our unique patented bolt head protection which eliminates the opportunity to breach the fence by removing the heads of fixing bolts with a chisel.

Each batch of Scorpion that we manufacture is performance tested to BS1722 Part 12 : 2006 to ensure that fencing is supplied to the highest standard available. Where product is sold to standard a certificate of conformity is available.

Range Ref:	Performance	Recommended Usage
Scorpion 1	Standard Security	Perimeter fencing
Scorpion 2	General Purpose	Schools, campus and industrial sites
