10<sup>th</sup> March 2016

HPK/2015/0671 - Pumping Main Installation

To whom it may concern

*The requirement for the proposed works is 2-fold;-*

- 1. To improve the quality of the water that we discharge to the infiltration pond. We wish to do this by pumping a proportion of our effluent through these proposed works to the authority sewer, whilst all excess spring-water will be separated and sent to the site infiltration pond.*
- 2. To future proof our wastewater system in light of the knowledge that the EA will continue to tighten discharge parameters and proposed operational changes within the factory. By having a permanent connection to the sewer (and appropriate licence in place with STW) we will be in a position to respond immediately should EA changes dictate such action.*

*The storage tank noted will have a capacity of 40m<sup>3</sup> and will be located entirely below ground, with just 2 manhole covers being visible at ground level.*

*Upon installation of the tank and the pipeline the landscaped areas will be re-instated to the current standard.*

*The section of works within the highway will be carried out under a streetworks licence, issued by Derbyshire Highways, and the works will be subject to temporary traffic control for which permission will also be sought from "highways".*

Yours sincerely  
Craig Airey  
Project Civil Engineer
