Re: London Place, New Mills, Derbyshire SK22 4ER

Aboricultural survey:

Perimeter consists of a mature Cupressocyparis Leylandii screen approx. 20-30 years old. Evidence of thinning out / pruning in recent years. The conifers are in good health, structurally sound and serve as a screen. The conifers are planted solely along the perimeter. No evidence of disease, root damage or erosion.

Also present:

1 x Self seeded Corylus Avellana approx. 8-10 years old in good health

1 x Self seeded ornamental Punus cerasifera approx. 8-10 years old

1 x Mature Malus Domestica apple tree. Showing signs of decay with dead wood evident and moss / lichen covered branches.

Mature **shrub planting** along the perimeter consists of:

- Several mature Rhododendron macrophyllum – Some die back and bare lower branches consistent with old age
- Forsythia x intermedia
- Ribes sanguineum
- Buxus sempervirens.

Date of survey: 27th April 2016
