

# DESIGN & ACCESS STATEMENT

Briargrove House, Briargrove Rd, High Peak, Derbyshire, SK22 1AY

Proposed addition of Glazed Barn Door, Two Storey Side Extension and Loft Balcony

## 1. EXISTING SITE AND HISTORY

Briargrove House is a Derbyshire gritstone property built on the site of some old farm buildings for Briargrove Farm. The building and approximately 2 acres of land were separated from Briargrove Farm in 1995. Briargrove House stands in its own grounds and as it is higher than Briargrove Farm and there is a large hedge between the two properties, they are now well separated.

**Figure 1 - Existing Location**

Vehicle access is along the north side of the property from a shared access road to Briargrove Farm and the other properties in the group. There is presently a large tarmac parking and turning area to the north.

Briargrove House is built into the hillside and as such is somewhat sheltered from the prevailing south-westerly winds, and is significantly lower than Briargrove Road. It is mostly hidden from the road by the hill and gardens but has good views predominantly to the north and east. To take advantage of the views the existing property is arranged with living accommodation on the first floor.

**Figure 2 - Existing section showing Briargrove Road and the hill**

In 1948, the original buildings on the site covered a significantly larger area, and were 'L'shaped. The two plans are overlaid in Drawing 391-01.

**Figure 3 - 1948 Map**

The existing property has fairly low eaves and plain gables.

## **2. DESIGN PRINCIPLES**

The applicant wishes to extend the house, while retaining and enhancing the character of it as a period barn. The extension is a modest extension, and the previous (domestic looking) porch extension will be removed.

The extension is proposed at the west end of the building to avoid crowding the other properties at Briargrove Farm, and is tucked into the hillside in a style which is typical of the area, minimises the visual impact, and provides direct access from the garden to the first floor of the property.

The Planning Department policies are considered by using the following principles:-

**Amount:** The proposed extension is significantly below the original 1948 footprint, and is only a modest increase on the footprint of the approved planning application 02/6005 CONVERSION OF REDUNDANT BARN TO DWELLING AT BRIARGROVE ROAD BARN ADJ. BRIARGROVE FARM BIRCH VALE.

**Layout:** The extension is located in the large garden, mostly over existing areas of hard standing.

**Scale:** The extension is in keeping with adjacent properties in terms of scale and positioning. The eaves height of the gable extension will be set lower than the existing property. Much of the proposed west elevation, and the western end of the south elevation, will be below the ground level.

**Landscaping:** The property will have largely grassed slopes to the west to meet the existing garden and field. A modest area of permeable hard surfacing where appropriate will provide an entrance to the extension at first floor level.

**Parking** will be maintained as existing.

**Appearance:** The appearance of the proposed extension will be a continuation of the current design. The extension is not very visible from the highway. The design and materials have been carefully considered with materials to match the existing property.

The domestic style porch will be removed, and an arched 'barn door' reintroduced into the south elevation. This will be fully glazed with a pedestrian access door as is typical of period barn conversions.

## **3. DESIGN SOLUTIONS**

The restricted daylight in the existing property has been improved by the addition of the glazed barn door in the south elevation (overlooking the garden). A limited number of new openings are added to the extension. No new window openings have been added to the east elevation of the existing property, which looks across to The Barn.

The proposed extension will have most glazing to the south west corner of the first floor, to improve passive solar heating and daylight levels. No new windows overlook neighboring properties.

**Figure 8 - Proposed south-west corner (view from hill)**

Mature planting to the boundaries gives existing adequate screening. Some new infill planting will be provided to the west.

The existing property, and new extension will still have substantial gardens and the magnificent views over countryside to the north and east.

A 3D sketch of the proposed east elevation is shown below. With the removal of the existing porch, the house is reduced in size from this elevation.

**Figure 9 - Proposed east elevation**

This elevation continues the style of small, somewhat random window positioning into the new extension.

**Figure 10 - Proposed view from north-east**

#### **4. SUMMARY**

By careful planning and design the proposed extension works extremely well as a discrete addition and alteration. The new extension is subservient, and the recreated glazed barn door makes the house much more barn-like and also ensures the extension does not make the house look unbalanced.
