Caring For the Environment Today

“The Complete Solution to Invasive Weed Control That Embraces the Legal and Statutory Requirements to Eradicate the Problems and Prevent Costly Prosecution”

Objective

To inspect the site for the presence of Japanese knotweed (*Fallopia Japonica*), report the findings and propose a solution to any infestation found on site

Findings and requirements

Site consists of an area of woodland and dense undergrowth close to the corner of North Road and Talbot Road, Glossop, SK13 7DP

Surrounding areas comprise of further woodland, new build residential premises, existing premises and educational facilities.

The site was inspected in August 2016 during the main growing season with visible growth identified in one area of the site.

Visible growth was noted to be present within undergrowth towards the north western corner of the site with further sporadic growth being evident around the peripheries of the main stand.

It is proposed that the site be developed for residential use however it is not expected that the knotweed will fall within the footprint of the building. This would be subject to confirmation prior to construction.

Approx OS Co-ordinates of the infestation

Area 1 – SK 03320 94830

Due to the location of the knotweed it is expected that herbicide treatment can be carried out. Treatments will consist of stem injection or foliar applications of herbicide with chemical selection being made dependant on the location of the knotweed and nature of any surrounding desirable vegetation. Whilst every effort will be made to retain as much desirable vegetation as possible no responsibility can be taken for any loss or damage.

It is worthy of note at this point that in knotweed infested areas root systems **can** grow 7 metres outwards from the visible plant and in excess of 3 metres deep and if the spoils are dispersed on site, re - infestation will occur. This has been used as the minimum distance in the assessment process to establish the risk category that the knotweed presents to your property (See Fig 1 below).

Category	Descriptors
4	Japanese Knotweed is within 7 metres of a habitable space, conservatory and/or garage. Either within the boundaries of this property or in a neighbouring property or space; and/or Japanese Knotweed is causing serious damage to outbuildings, associated structures, drains, paths, boundary walls and fences and so on. Further investigations by an appropriately qualified and/or experienced person are required.
3	Although Japanese Knotweed is present within the boundaries of the property, it is more than 7 metres from a habitable space, conservatory and/or garage. If there is damage to outbuildings, associated structures, paths and boundary walls and fences, it is minor. Further investigations by an appropriately qualified and/or experienced person are required.
2	Japanese Knotweed was not seen within the boundaries of this property, but it was seen on a neighbouring property or land. Here, it was within 7 metres of the boundary, but more than 7 metres away from habitable spaces, conservatory and/or garage of the subject property.
1	Japanese Knotweed was not seen on this property, but it can be seen on a neighbouring property or land where it was more than 7 metres away from the boundary.

It may be a stipulation by your bank or mortgage lender that all recommended remedial works must be undertaken and covered by an insurance backed guarantee for a minimum of 10 years. The premium for this policy has been included within this report

Please note: soil material will continue to be classed as contaminated even after completion of the knotweed treatment programme and if removed from site must be done so in accordance with current waste regulations by a licensed carrier to an appropriate receiving facility.

Additional control measures:

- Infested areas (to include buffer zone) should be clearly identified.
- Unauthorized access disturbance or removal of contaminated material should be prevented.
- Restrictions regarding access to the infested areas and any applicable restrictions regarding movement of plant and vehicles, should be communicated to all on-site personnel.
- Vehicles, equipment and footwear should be inspected and cleaned prior to exiting contaminated areas.
- Should access to the area be required during the treatment period, advice should be sought prior to entering.
- Where knotweed is identified on adjacent land, owners should be informed so that appropriate actions can be taken to prevent re-infestation.

Proposed Method Of Treatment

Knotweed Eradication would use a selection of the following MAPP and E.A. approved products on the infested areas. Chemical selection will be made based on location of treatment area and surrounding environment by in house BASIS qualified advisors.
