

Notes
All soft landscape works to be carried out in accordance with BS4428:1989 Code of Practice for General Landscape Operations.

All new tree planting shall comply with BS4043:1989 Transplanting root-balled trees and BS3936:1992 Nursery Stock Part 1. Specification for Trees and Shrubs.

Follow good modern horticultural practice in any proposed soft landscaping

2No. Acer campestre 'Streetwise'
Install Root Barrier as per notes

KEY & NOTATION

Proposed Tree Planting (General)
The excavated hole shall be of sufficient size to accommodate the root-ball or container, allowing approximately 500mm clearance. Before planting the sides of the pit shall be broken up and the base dug over to a depth of 150mm to improve drainage. The tree will be planted to the same depth as it was in the nursery. Backfill will be firmed in around the rootball to prevent any air pockets. The pit shall be backfilled with a 1/3 mix of good quality topsoil and an on peat based compost. 140gms of Emag granular slow-release fertiliser shall be incorporated to the fill mixture.

Trees in soft ground

Trees shall be double staked and fixed to horizontal crossbar using rubber strapping, with rubber block positioned between the tree and cross bar. Stakes shall be 60mm diameter treated softwood, driven firmly into ground either side, and not through the rootball, with tree central between the stakes. The above ground height of the stake should be a minimum of a third of the stem high. All trees to receive perforated watering pipes surrounding root ball.

Tree Aftercare

Any necessary formative pruning will be carried out and where appropriate woodchip/bark mulch applied to a depth of 75mm, and to at least the edge of the planting pit. A properly planned maintenance programme should be kept up until successful establishment of the trees. This may include watering when necessary, checking of the support systems, weed control and further mulching.

Root Barriers

Where an installed rootball is within 3m of an existing underground service route or within 2m of rear of pavement, install protective root barrier with sides vertical and finished 75mm below finished ground level. To be Greenleaf ReRoot 2000 or similar approved.

Proposed Areas of Shrub Planting

Shrub areas to have minimum 450mm depth of good quality imported cultivated topsoil, free from bricks, large stones and other rubbish. Mycoforce Transplanter shall be spread around the roots of each plant during planting at a rate specified by the supplier, Tel: English Woodlands Burrow Nursery 01435 862992.

All shrub areas shall have 75mm depth Melcourt Ornamental Bark Mulch, (or similar approved).

Grass Turf

To be good quality treated meadow turf, laid in staggered rows with joints butted up. Prepare 150mm clean topsoil free of builders rubbish and other objects over 15mm in size.

Ornamental Hedge

Refer to shrub planting specification above. Ensure all plants are bushy to provide joined up length of hedge. Trim all hedges to 600mm at planting to promote new growth.

Gold Gravel Mulch

20mm Golden Pea Gravel over Weed prevetative membrane
