Hi Pat,

For whom it may concern

I can confirm that the water borehole drilled at SK13 5SB for your site for planning application HPK/2016/0386 was successfully drilled to a depth of 50m and was tested using compressed air to be yielding 8l per minute (11,520l per day) which is more than sufficient for the demands of your proposed property.

Kind Regards,

Sam Ellison
Dragon Drilling
