SEDUM BLANKETS

Extensive Green Roofs

The Bauder sedum blanket systems feature up to 11 species of sedums with some mosses and grasses to ensure plant diversity. The succulent plants are frost, wind and drought tolerant and are selected to suit our climate and provide colour and interest through the spring and early summer.

We have two types of sedum blanket available; the multifunctional XF301 with its patented carrier, which holds both the substrate and vegetation and acts as both water retention and drainage layer; and the XF300 where the carrier supports the cultivation substrate and then once installed the roots grow through and establish in to the substrate of the green roof system below.

Mount St. Vincent
Co Limerick

SYSTEM SPECIFICATIONS

The Bauder XF301 has a patented carrier, which holds both the required amount of substrate (20mm) and supports the vegetation, firmly holding it in place; whilst the attached moisture retention fleece provides the perfect base for a lightweight roof scenario.

The XF300 Sedum Blanket is installed over a substrate base of around 80mm depth which allows for increased rainwater attenuation capacity, thus reducing the level of rainwater entering the drainage system.

KEY ADVANTAGES

- Delivers instant greening of a roof with sedums and other species all able to flourish in our climate
- Quick and easy to establish
- Cost effective
- Developed to meet FLL guidelines
- Cradle-to-Cradle certification
- Sedum blankets are grown on our farm in the UK and delivered to site within 24 hours of harvesting
