Subject: New Mills Albion road development - HPK/2020/0057 - Site safety concerns
Date: 15 March 2021 14:33:28

Hello,

Whilst out on the canal today i witnessed some things going on at this worksite which i was concerned about. please see below:

- there is currently an unsupported excavation of a vertical soil face, approximately 2.5-3m high which is supporting houses. There was no indication at the time that any temporary propping was being carried out.
- Whilst walking up the road toward New Mills Newtown station the contractors were operating a digging unit over the fencing board above the footpath without adequate pedestrian diversions or exclusion zone. only a few cones had been put out with the men operating the machinery distracted by their work.

apologies for the lack of photos, i was exercising and did not have a mobile with me.

I would recommend that you send somebody suitable to the site to confirm you are satisfied with the measures in place.

Regards,

M. Dockray
