

## **Planning Application for Muck Trailer Cover/ Hay Store, 28 Rhodes Top.**

### **Use :**

The lean too will be used for storing the muck heap and hay in winter. This is to prevent the wind blowing hay and used straw around the stable base, garden and into the residential area which backs onto the fields.

### **Amount :**

One lean too.

### **Layout:**

This is a retrospective planning application and therefore the layout is included in this photograph taken on the 14/10/2020.

### **Scale:**

The scale is designed to fit one trailer and 50 bales of hay.

### **Landscaping:**

The lean too has been sympathetically built to improve the appearance of the area and is in keeping with the wooden stables it is attached too.

### **Access:**

The road up to the stables has been renewed and access does not need to be changed. It allows perfect access for a tractor to come and remove the muck trailer monthly as per planning permission requirements with minimal disruption to the residential area which surrounds it.
