

11th July 2022

Aldi Store – FOXLOW FARM, BUXTON

CONDITION 15: Refuse Storage Scheme

We confirm, on behalf of Aldi Stores Ltd, that separate waste storage facilities for recycled and general waste, generated during operational, use are provided within the development.

General waste will be stored within an externally secured area, bins provided with an individual capacity of 1,100 litres.

The majority of waste generated by the store will be cardboard packaging, and a mill sized baler will be installed to a dedicated space within the warehouse area. Compacted cardboard will be stored in a dedicated space adjacent, ready for collection by store delivery vehicles and return to Aldi Retail Distribution Centre (RDC) where it is then collected for recycling.

Aldi stores operates a recycling policy and the following materials are stored for recycling within a dedicated space within the warehouse area:

- Plastic shrink-wrap
- Cardboard (returned to RDS in bales)
- Paper (returned to RDC in bales)
- Batteries
- Cans (aluminium drinks)
- Animal Bi-products

All materials are collected and returned to the RDC, where they are forwarded for recycling, with the exception of animal bi-products, which are stored in dedicated recycling bins within the cold storage areas, and collected directly from here.

The dedicated recycled storage spaces are clearly defined, with signage provided listing recycled materials, and dedicated bins clearly identified.

Yours sincerely
The Harris Partnership Limited
