I am emailing you with my concerns over this proposed planning application. These include:

- the increase in traffic in the Dinting area, which is already at breaking point in terms of congestion. At rush hour the pollution caused by standing traffic is already causing issues around the local primary school and by adding 100 new houses, many of which will have more than one car per house, will exacerbate the problem. Surely this goes against any environmental clean air policies in place at council level.
- An extra 100 houses will increase pressure on the local schools, which already have large class sizes. There will be added pressure on the local GP services, which are now stretched, making appointments hard to book.
- The impact on local wildlife and the ecosystem will be destroyed with more pressure being put on animals to survive in a smaller area of natural habitat. The bigger picture has to be looked at here with a longer term vision being considered about our long term goals for the planet and how local preservation fits into the bigger global picture. This proposed short term fix is not the solution.
