Submission: Support

Comments: I have read much of the documentation, attended the public consultation event and visited the site, and on consideration of these would like to register my support for the proposal.

I appreciate the urgent need to provide the low-carbon infrastructure we will need in order to avoid the catastrophic effects of climate breakdown, and this proposal is a small but essential contribution to this.

I understand that suitable sites are limited, and that this proposal is based on these constraints, and cannot be located at other sites in the area.

I consider the visual intrusion to be minimal; the site is already hard to see from surrounding paths and roads, and will have further screening.

I am particularly interested in the effect on nature and wildlife, note the relatively low value of the land at present, and am pleased to see the mitigation for this will improve the habitat. I am also pleased there is no need for external lighting.

I note traffic generation will be minimal once construction has finished, so is no cause for concern.

Overall, I consider the need for such infrastructure to outweigh any adverse effects of locating the facility on this site, and consider the mitigation measures to be appropriate. Indeed by doing nothing and failing to address the causes of manmade climate change there will be far more severe repercussions on most of the planning considerations than the impact of proposals like this.
