Submission: Objection

Comments: I am appalled that this is even being considered. I lived at 29 Park Crescent with my parents for 25 years, where they still live now and you can see the proposed site for this monstrosity from the address. My son will be attending Furness Vale Primary School from September and the proximity of this to the school is concerning, considering the effects should there be a thermal runaway or catastrophic failure, both on the residents and on the environment. This will be a complete eyesore and is completely counter-productive if the aim, (or should I say guise to get this approved) is that this is supposed to be greener energy when you are essentially just damaging the environment in another way, not to mention ruining the view and being an extreme fire hazard. Our green belt land should be preserved and protected, and the proposals do not fall within any of the categories of acceptable development in the rural areas as set out in Policy EQ3 of the High Peak local plan. The effects on the landscape would be detrimental. I have been reliably informed that there is insufficient emergency provision in the area to sufficiently deal with any incident, as there would be nothing that they could possibly do to extinguish a fire of such magnitude and no contingency planning could offer a solution to an incident such as this. Knowing that an electric car of roughly 3MWH that had set on fire and can burn for 24 hours, it is unimaginable to think how long this proposed site would burn for and it would be simply catastrophic. The effects on residents and the environment of the toxic fumes that would be produced would be disastrous. The road access to the site is also inadequate, and there will be no benefit for local residents. I urge that this be reconsidered and protect this beautiful safe space in the High Peak. I understand that there is a need for more sustainable energy but this is unsustainable and not the answer for the High Peak.
