The revised application does nothing to mitigate noise and damage to the environment.

In addition as the last winter has shown, the field holds water for a long time due to poor drainage.

The owners planted saplings in 2022, all failed to grow.

This brings into question the feasibility of tree planting as described in the current plan.

I also note that this application has not been handled well by the planning department and raises questions over the departments impartiality.

For example I only found out about the application when eventually the yellow notice was posted, some time after the application was submitted.

There was no yellow notice at the commencement of the planning application period and the current yellow notice has been removed, while the application's comment period is still open.
