

A line drawing of a long, two-story building facade. The building is divided into sections by vertical lines. Each section contains a row of windows on the upper floor and a row of windows or doors on the lower floor. The windows are rectangular with multiple panes. The doors are arched with decorative elements. The drawing is a simple line art illustration.

A line drawing of a three-story building facade. The building is symmetrical, divided into three main sections by two vertical lines. The central section is the widest and features a large, blank rectangular area on the top floor. The two side sections are narrower and each have two windows on the top floor. The middle section has two windows on the second floor and two on the third floor. The side sections each have two windows on the second floor and two on the third floor. There are four chimneys on the roof: one on the far left, one in the center of the middle section, one in the center of the right section, and one on the far right. The drawing is a simple line art style with no shading or color.

The image contains two identical line drawings of a house facade, positioned side-by-side. Each house features a gabled roof with a chimney on the left side. The upper floor has a double window with a decorative lintel and a sill. The lower floor has a single window, also with a decorative lintel and a sill. The windows are divided into four panes each. The entire drawing is composed of black outlines on a white background.
