Hello

I would like submit a couple of photos (sorry about the quality) in support of BERG findings in support of Barn Owls on the site . On the morning of Wednesday 21st around 0730 (dark damp morning at that time) I observed the Barn Owl flying and hunting for several minutes, landing a couple of times in the field . Eventually after being harassed by crows it was chased off . Hard to get a good shot due to weather conditions and the capabilities of my phone but I have witnessed the Owl before on site .
