Submission: Objection

Comments: These works have entailed the tipping of a large quantity of lime waste downslope into a sensitive area. The affected area is of high nature conservation interest with species such as Rock Rose, Marsh Arrowgrass and Fragrant Orchid. I understand it is being proposed as a new Local Wildlife Site. It is also a Regionally Important Geological Site as shown on the Local Plan. The tipped material has fallen onto a watercourse further contributing to the high pH of the water which flows down the valley into Ferneydale Local Nature Reserve and Sherbrook Wood. Any landscaping such as the addition of topsoil and treeplanting may also adversely affect existing fauna and flora and ideally the site should be subject to an ecological survey before any such works are undertaken.
