

Quality assurance

From initial purchase of the raw materials to the finished product, Queensbury Shelters operate a strict Quality Assurance policy on every aspect of a new shelter constructed at its own factory. All shelters comply with stringent quality control standards, and designs are structurally analysed to ensure that they meet all current regulations.

Installation

Our complete installation service includes excavation, backfilling and reinstatement. All installation and maintenance work is carried out by skilled engineers, qualified to the rigorous standards demanded by the New Roads and Street Works Act 1991, in strict accordance with appropriate Health and Safety, and electrical regulations.

Maintenance

To keep your shelters in first class condition, we offer an efficient maintenance service, covering replacement of damaged glazing, structural repairs and general maintenance.

Maintenance can be carried out as a one-off on request or as part of an annual contract, which may include regular preventative maintenance and cleaning. Large scale refurbishment programmes can be undertaken from our bases in the south and north east of England.

Ask the experts

From a single village shelter to the development of multi-shelter schemes on urban bus routes for towns or cities, our customers benefit from expert help and advice.

Our extensive knowledge and experience in all aspects of shelter development, production and maintenance means we can help you assess and select the most suitable shelters.

We always suggest the best solutions and provide comprehensive quotations that are clear and easy to follow. Queensbury Shelters' free consultancy service is only a telephone call away.

Lighting

Can be installed in all types of shelter for additional convenience and safety.

Mid-rails

Can be provided to match the shelter or in a contrasting colour for enhanced visibility and safety.

Arun range

Queensbury's most popular shelter, the versatile Arun range, has become the first choice for users who require an elegant, practical shelter of sturdy construction.

With a wide variety of configurations, the Arun looks equally at home in villages, historic towns and major cities – as a small shelter on a village green or as a 50 metre plus town centre bus interchange shelter.

The Arun, with a choice of roof shapes and sizes, can blend into the most sensitive of locations, both rural and urban.

A steel, vandal resistant frame gives the Arun its unique strength which far out performs shelters manufactured from other materials. Queensbury's own glazing system is secure and unobtrusive, yet easily accessible for maintenance.

The standard Arun shelter is available in two module sizes, 1000mm and 1290mm, and two widths, 1380mm and 1510mm.

Specification

The Arun range of shelters are constructed with zinc protected steel posts (60 x 60 SHS) and welded roof supports. Extruded aluminium glazing system with hidden fixings provides additional safety and resistance to damage.

Barrel Vault and Pitched roof glazed in 4mm polycarbonate (clear or bronze). Side glazing 8mm toughened glass or 6mm polycarbonate, polyester powder coated with stainless steel fixings.

Arun Terminus shelter

Developed as an addition to the Arun range, the Terminus offers additional flexibility that makes it particularly suitable for bus stations and high capacity projects.

Options

- Cantilever and Enclosed models
- Full and half width wing panel on cantilever
- Extended length
- Toughened glass or polycarbonate side glazing
- Mid-rail
- Low Barrel Vault or Pitched roof
- Integral seating
- Illumination
